

Minimum Advertised Price (MAP) Compliance System

1. Project Overview

The MAP Compliance System automates detection of Minimum Advertised Price (MAP) violations by integrating product, SKU, pricing logic, and seller marketplace data.

2. Objectives

Load multi-format datasets, standardize data, merge records, validate business rules, detect violations, and generate compliance reports.

3. Technologies

Python, Pandas, OpenPyXL, JSON, XML, PyYAML.

4. Workflow

Load input files → Preprocess → Merge datasets → Apply MAP, discount, and region rules → Detect violations → Generate reports.

5. Input Data

PL Table (JSON), SKU Table (XML), LPP Logic Table (Excel), Seller Marketplace Data (Excel/CSV).

6. Business Rules

MAP Violation: Advertised Price < MAP Price. Discount Violation: Discount exceeds allowed threshold. Region Violation: Seller operates outside permitted region.

7. Outputs

Violation Report, Seller Compliance Report, Summary Report.

8. Future Enhancements

Dashboard integration, REST API, email notifications, database support, cloud deployment.
